

GRIDMARKETS SCHOLARSHIP 2017

CASE STUDY

Judgify✓

BACKGROUND

[GridMarkets](#) is a global cloud rendering company that works closely with freelancers and visual effects studios around the world to process high-quality content for the film, television, and commercial industries. Several months ago, GridMarkets implemented a student discount program - which attracted a sizable following of students from around the world.

The Company recognized that many compelling benefits would result from connecting its student and professional customers. With this thought in mind, the inaugural 2017 GridMarkets scholarship was established. Its goals were threefold, to:

1. identify and promote talented animation students,
2. create opportunities for students to engage with industry professionals, and
3. provide industry professionals with a window into student talent.

Two leading universities participated in this first of its kind scholarship: [Brigham Young University](#) and [Savannah College of Art and Design](#). To be considered, students were required to submit an original 90 second animated video created with [Houdini](#). All submissions also included a “breakdown” (i.e. detailed explanation) of how the video was created. The latter required students to articulate the technical and aesthetic judgements used during the creation process - and formed part of the judging criteria.

[Judgify](#) made it possible for a virtual panel of distinguished industry judges to evaluate and decide the best of the submissions. Judges evaluated a submission’s aesthetics, technical merits and clarity of the breakdown.

The winning submissions were “[Going Down](#)” by Ben Nelson (of [Brigham Young University](#)) and “[Hope](#)” by Alireza Bidar (of [Savannah College of Art and Design](#)). These two submissions showcased the completeness of animated compositions and great artistic communication. The winners were granted \$US3000 GridMarkets rendering credits for the academic year, \$US500 of tuition support, Houdini Indie licenses (thanks to [SideFX](#)), a full [SigGraph2017](#) pass (thanks to [Sohonet](#)) and mentorship (thanks to a number of professional VFX artists).

CHALLENGES

As the scholarship competition was organized for the first time, a range of challenges emerged.

Challenges to address

A location independent system needed to be established for the judging process - as the participating judges spanned the globe. Also, given the demanding schedules of the judges, a responsive and intuitive platform was needed to minimize time-consuming training.

Why did it matter?

Without a user-friendly system for flexible project submission and evaluation, neither judges nor students would have been able to meet the deadlines.

The implementation options considered

The scholarship organizers considered, but hoped to avoid developing a proprietary solution for their scholarship requirements. When the Judgify solution was discovered - it seemed a very good fit.

The failure to select a convenient, reliable and intuitive judging platform would most certainly have derailed the scholarship timing, or even result in the contest's cancellation. An inability to process submissions within the given timeframe could have been frustrating for hard working judges volunteering time from their busy lives. This would risk the experts calling off their engagement with the program.

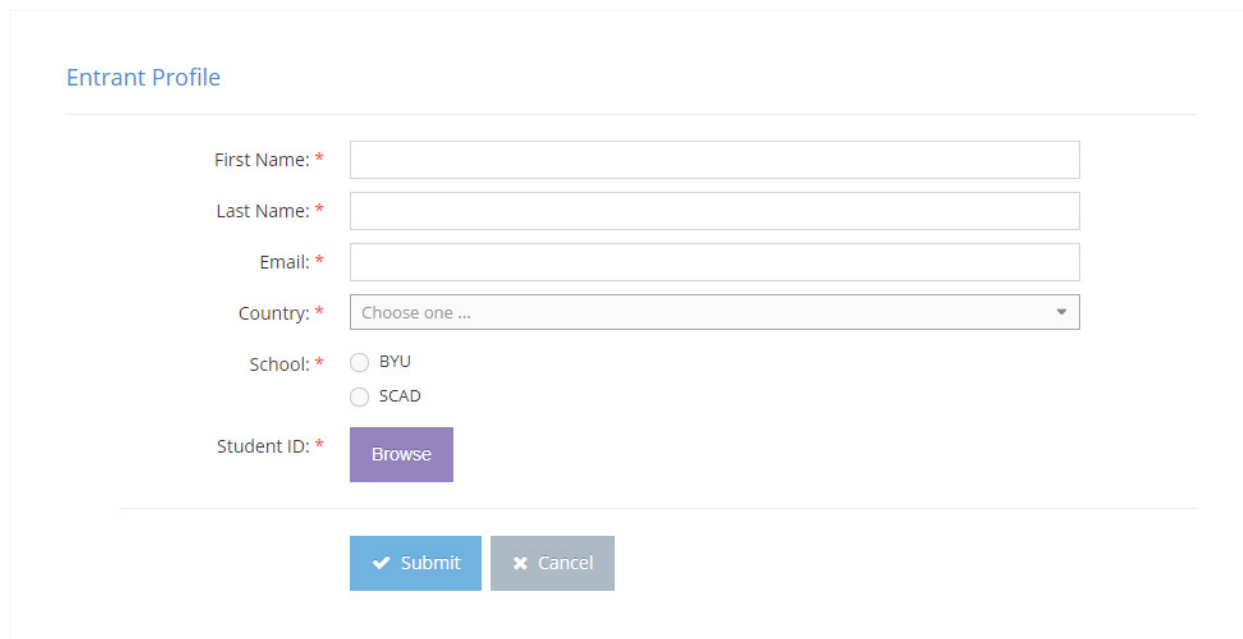

ACTIONS

Upon testing several software solutions for awards contests, GridMarkets chose Judgify as the most proficient and easy-to-use. The scholarship organizers also found the customer support friendly and approachable which helped them make their final decision.

When it comes to the roles of Judgify, the software was responsible for accepting the submissions from the students and presenting them to the judges as efficiently as possible.

Judigify, So intuitive No training necessary

Due to time zone differences, it would have been very challenging for the GridMarkets 2017 organizers to train judges and contestants on the software. As Judgify's intuitive interface eliminated any training requirements . . . GridMarkets made a choice to start the contest with minimal guidance. Although approaching the software as inexperienced users, the judges had no issues or questions on its use.

The screenshot shows a web form titled "Entrant Profile" in blue text. Below the title is a horizontal line. The form contains the following fields and controls:

- First Name: *** followed by a text input field.
- Last Name: *** followed by a text input field.
- Email: *** followed by a text input field.
- Country: *** followed by a dropdown menu showing "Choose one ...".
- School: *** followed by two radio button options: "BYU" and "SCAD".
- Student ID: *** followed by a purple "Browse" button.

At the bottom of the form, there is another horizontal line, followed by two buttons: a blue "✓ Submit" button and a grey "✕ Cancel" button.

Judging anytime and anywhere

The judges were able to sign in at their convenience and start their evaluation of the submissions anytime. Due to the full integration with mobile devices set in place, there was also no restriction on the means of accessing the platform.

Through the help of customization modules, setting up the judging criteria and evaluating the projects accordingly were simplified considerably.

There were two judging rounds involved. They were easily launched with the feature of setting up an unlimited number of rounds per click. All submissions were open for access to the judges from the centralized dashboard.

| Scorecard criteria | | | | |
|--------------------|-----------------------|--------------------------------------------|-------------|-------------|
| Criteria # | Criteria title * | Criteria description * | Min score * | Max score * |
| 1 | Goal Accomplished | Was the goal that the student set for them | 0 | 10 |
| 2 | Goal Ambition | How ambitious would you say the goal was | 0 | 10 |
| 3 | Technical Proficiency | How well did the student execute the tech | 0 | 5 |
| 4 | Aesthetic Proficiency | How well did the student execute the aest | 0 | 5 |
| 5 | Breakdown Clarity | Was the breakdown easy to follow and pri | 0 | 10 |

RESULTS

The cooperation between Judgify and GridMarkets was win-win. With all objectives met, the software proved to be a good solution for judging from diverse locations around the world.

Minimal training resulted in smooth Judgify use for everyone, which is great proof that the intuitive interface of the software facilitated error-free user performance.

Due to unlimited scaling and the lack of restrictions on uploaded file sizes, the participants had no issues with forwarding their projects to the judges. The only feature that might have enhanced the experiences that the contestants had would be having an URL link or a video embed option in the submission form. Although it was possible to put links into a single line field, the judges still had to copy and paste them.

Given the aggressive timeframes for the judging exercise, GridMarkets organizers concluded that it would have been impossible for judges to complete their evaluations on time without the use of Judgify. With Judgify's simple judging round and submission setups, time-efficient project evaluation became an integral part of the process.

The screenshot shows a web form titled "Submission Details". It contains several input fields and a rich text editor. The fields are: "Category:" with a dropdown menu, "Endorsement email:" with a text box, and "Title of Entry:" with a text box. Below these is a section titled "Supporting Material" which includes a "PDF Breakdown:" label, a "Browse" button, and a text box with a placeholder message: "PDF document containing the breakdown of your submission. BE SURE YOU INCLUDE YOUR GOAL IMMEDIATELY IN THE INTRODUCTION!". There is also a "Submission URL (YouTube/Vimeo):" label and a text box with a placeholder "YouTube or Vimeo". At the bottom of the form is a "Brief description of submission goal:" label and a rich text editor with a toolbar containing icons for bold, italic, underline, strikethrough, text color, background color, link, unlink, list, and indent. The rich text editor has a placeholder text: "Give a brief idea of the goal you were working towards." At the very bottom of the form are four buttons: "Submit", "Submit & Add New", "Save As Draft", and "Cancel".

PERSPECTIVE

GridMarkets Scholarship 2017 opened up a new space for fostering young talents with the help of tech innovation. Although the number of participants taking part in the inaugural contest was not that high, the organizers plan on boosting the engagement next year. By attracting ambitious youth from all over the globe, GridMarkets is expecting to breathe new life into the understanding of visuals and animation in an academic setting.

By powering the inception of GridMarkets 2017, Judgify also gained great incentives for growth. With the acquired expertise, we will proceed to automate the processes of submission and evaluation. We will also improve our features for locating video materials and the ability to provide additional comments for submitted projects.
